

Hello World Docker

1. Create folder "01-Hello World".
2. Create application.js file and include one line as shown below.

```
console.log("Hello Docker!!!");
```

3. Create Dockerfile in same folder and include following instructions.

```
FROM node  
WORKDIR /app  
COPY . .  
CMD ["node", "application"]
```

4. Open command prompt in "01-Hello World" folder.
5. Build docker image using the following command.

```
sudo docker build -t hello .
```

6. Run the docker image using the following command.

```
sudo docker run hello
```
